

Soldering notice:

1. MP3 module and USB seat soldered in the back. BT1 for the battery box interface.
2. Electrolytic capacitor (C1) positive (long foot) should be soldered with "Pad + position" in the circuit board diagram superscript, light emitting diode (D1~D50) cathode (feet) pad should be soldered square in circuit board diagram on the pad position or the circuit board is marked with "+" sign the. The negative electrode of the diode (D51) must be soldered on the square pad.
3. Please don't use more than 6V of the power supply to this kit!

Music download method(Only supports MP3 format):

Connect the MP3 module to the computer, and the module will become a U disk. Directly into the U disk can be songs.

Method for playing U disk:

With the transfer line will be connected to the U MP3 module, the power can be switched on the U disk in the MP3 file.
